Description :

Prsentation de l'diteurThis book is for the amateur musicians who are interested in electronic wind instruments in general and the Akai EWI5000 in particular. It explains the functions of the EWIs various sensors, synthesiser components, audio effects, and external connections. It gives a visual map of the EWIs maze-like menus, and shows how to configure the hardware parameters. And it describes the similarities and the differences between the EWI and the traditional wind instruments. But this book is not meant to replace

the official Akai publications. It is also not a tips-and-tricks book that teaches you how to make fancy balloon animals out of the EWI, and it is not an instruction book that teaches you music theory fundamentals. It is focused on the technical information about the EWI, the sort of information not found in the official manuals, the sort of information you can use to decide whether the EWI is right for you if you have not already purchased one, the sort of information you can use to explore the numerous musical possibilities if you did purchase one.

2015-10-16:Fix error about conical and cylindrical bores
2015-05-26:Distinguish perceptual terms from physical terms
Add to care and maintenance section a tip on fashioning a cheap, lightweight carrying case
2015-04-24:Add explanation for room simulation reverb effect
Add description of DAC to audio connections section
Elaborate explanation of transposing instruments
Fix typographical and other minor errors
Fix ePub formatting error for Google Play
Update resources section
2015-04-16:Reformat table of contents for better navigation
Add author contact information
2015-01-10:Change fingering charts colour from black-on to blue-on for better visibility
2014-12-31:Initial publication
